

SKILLS JavaScript, React, Node.js, Python, Express, Sequelize, Flask, SQLAlchemy, Postgres / SQL, HTML5, CSS3

PROJECTS

Medium | (*JavaScript, Express, Sequelize, Postgres*)

[live](#) | [github](#)

- Established authentication using bcrypt hashing and ensured privacy by restricting user access to only interact with their own data
- Created a Sequelize query that ranked stories by 'Claps' using Sequelize functions, so that the user can see the most liked stories
- Dynamically rendered a user's response to a story using AJAX, so that the response appeared without a refresh

Triply | (*React / Redux, Python, Flask, SQLAlchemy, Postgres*)

[live](#) | [github](#)

- Designed an algorithm to determine user coordinates at particular intervals along a Google route
- Utilized calculated location coordinates to create suggestions for points of interest based on proximity to each other and the original route
- Managed the communication between React components, Redux, and the algorithm, so that the user can make choices about the trip and observe the trip adjusting in real time

Muse | (*React / Redux, Express, Postgres*)

[live](#) | [github](#)

- Implemented an autocomplete combobox form that allowed the user to search for any value of the input field
 - The user can easily add new values to the database from within the combobox
- Rendered inputs in real time, using separate components in Redux, to create a graphical interface mimicking writing in a notebook
